## Fetal Monitor Report

The Fetal Monitor Report tracks the exposure of a declared pregnant worker and embryo/fetus by reporting exposures of the mother wearing a whole body dosimeter and an additional fetal dosimeter. The monthly report lists estimated dose from conception to declaration, rolling exposure history by month for both mother and child, and accumulated fetal totals for the gestation period. The addition of a fetal dosimeter also generates an additional page to the standard radiation dosimetry report that reports only the exposure to the declared pregnant worker and the embryo/fetus.
