Total number of participants scanned: 428
 Total number of participants with activity in other accounts during reporting year: 21

NOTE: This information is provided to assist you in compliance with state and federal regulations only. It is not to be used for any other purpose.
 The information provided may reflect either current and/or prior exposures during the reported year. If an individual is monitored with a non-Landauer dosimeter, the resultant exposure history may not be included in this report.

METER

METER is a monthly report that lists individuals who have had activity in other Landauer accounts during the reporting year. Each individual's exposures are summed across all facilities to help compare the totals with regulatory limits. METER helps to satisfy the information required for the NRC's and state agencies' requirement that occupational exposures be controlled within limits for all sources of on the job exposure.
