

# Simplify data management and reporting for your dosimetry program with RadWizard™

*RadWizard is a new electronic data management tool from LANDAUER, Inc., designed to help save you time and money. RadWizard provides vital dosimetry reports each month, including ALARA, unreturned dosimeters, unused dosimeters, pregnant workers and several other summaries. With this key information for your series, participants and dosimeters at your fingertips, you're better equipped to optimize radiation safety in your facility.*

“The spreadsheets and reports in the RadWizard make it easier than ever before to sort and review exposures, find out who is losing their badges or not wearing them, or perform a wide range of data analysis on our dosimetry, especially for a medical research university with a huge dosimetry program like ours. This has greatly reduced the time spent reviewing the records and will surely improve our dosimetry oversight capabilities and thus better our overall radiation safety program.”

– Steve Grimm, MS, CHP  
Deputy Radiation Safety Officer  
Emory University Hospital Midtown

With RadWizard, you can review comprehensive dosimetry program information in an easy-to-use electronic format, enabling you to quickly recognize dangerous or costly patterns that require action, and identify at-risk individuals or behaviors that you can influence.

**In addition, all reports and data summaries can easily be:**

- Filtered and sorted to track information for groups or persons of interest; for example, job classification, department or other custom categories
- Transferred into safety committee and other facility reporting formats within seconds
- Emailed to share program outcomes with colleagues
- Exported as Excel® files to perform additional queries and data manipulation

To learn more about RadWizard, please contact the LANDAUER sales manager in your area, or call 866.537.2234 to speak with a representative.
