Now you have options to manage dosimeter reading and analysis for your organization: through the standard purchase of analytical hardware or by saving on upfront capital and inventory management together with LANDAUER.

Our array of hardware readers is designed for small, medium and large sized laboratories and organizations. They exclusively read only InLight dosimeters for whole body, environment and emergency response monitoring. And, LANDAUER’s microStar® reader works for any single-point radiation dose measurement.

InLight microSTAR® dosimeters feature LANDAUER’s leading optically stimulated luminescence (OSL) technology and are designed for those with extensive data management capabilities who prefer to independently maintain data and issue dose reports.

Your laboratory or organization can choose to facilitate a state-of-the art radiation safety program with a LANDAUER solution designed to meet your specific needs.

See the comparison chart on back to better review your organization’s needs including technical support.

Now Offering Options to Managing your Complete Dosimetry System

## Feature

<table>
<thead>
<tr>
<th>Feature</th>
<th>OSL Technology</th>
<th>TLD</th>
</tr>
</thead>
</table>
| Reanalysis capabilities | Yes  
  • Validate unusual dose results  
  • Archive for future reference  
  • Can inter-calibrate with readers; uses same calibration and QC dosimeters on multiple readers for cross-calibration | No  
  Destructive readout |
| Pre-defined dosimeter sensitivities | Yes  
  2D engraved barcode identifies dosimeter sensitivity; no additional labor required to maintain sensitivities | No  
  Must maintain Element Correction Factors (ECF); requires increased labor and time to maintain ECFs |
| Increase in efficiencies | Yes  
  • Analytical process: 300 dosimeters / hour  
  • Annealing: 200 dosimeters / hour | No  
  • Analytical process: 100 – 125 dosimeters / hour  
  • Annealing: 100 dosimeters / hour |
| Simpler analytical process and reader maintenance | Yes  
  • No heating parameters to maintain  
  • No heat induced artifacts during readout  
  • Eliminates heating requirements; leads to reduced photonics maintenance | No  
  • Must maintain heating parameters  
  • Susceptible to heat induced artifacts for false positives  
  • Must be cleaned more often |
| Low dose precision | Improved accuracy and dynamic energy range | ---------- |
| Fade | Minimal fade; <5% in a year, which enables longer wear frequencies | Must correct for fade |
| Environmental Integrity | Excellent – indestructible; very robust.  
  • OSL in LANDAUER’s RadWatch has passed First Article Testing for nuclear survivability | Must maintain heating parameters  
  • Susceptible to high temperatures and water immersion  
  • Chips can crack and discolor |

---

### Investment

- Large upfront money required
  - Purchase all dosimeters
  - Purchase all analytical readers
  - Lifecycle 20 – 25 years
  - Can inter-calibrate with readers; uses same calibration and QC dosimeters on multiple readers for cross-calibration

### Hardware Support

- Responsible for service/maintenance contracts or training internal staff for servicing equipment

### Technical Support

- Limited consultative hours
- Must have maintenance contract for back up support

### Partnership Benefit

- No upfront capital
- LANDAUER provides inventory of dosimeters
- LANDAUER provides all reader hardware for supporting analytical operations
- Customer pays annual participation fee based on tiered pricing schedule
- 5 year contract required
- No inventory or hardware investment allows for easier transition as new technologies evolve

### Hardware Support

- LANDAUER provides all hardware support at no charge

### Technical Support

- Access to LANDAUER’s CHPs and medical physicists
- Backup support
