

Radiation Safety Support Services (RSS)

Operate a top-tier radiation protection program with tailored guidance from our remote team of radiation safety experts.

Our reliable consulting services enable improved compliance by providing you with easy access to regulatory experts who can help you resolve issues, answer questions, and discover program improvements.

Created by a current RSO who knows exactly what daily pressures and experiences come with the job, RSS provides time-saving assistance helping to improve your organization's safety response. We know how important it is to have a bulletproof radiation protection program, but not every radiation safety professional is an expert in the field. RSS provides that expertise without needing to hire additional staff. That, in turn, helps provide a cost-efficient solution: access to some of the best industry professionals without the added cost of additional hiring.

Dosimetry Management

This subscription-based service provides expert review, signing, and management of all associated dosimetry reports suitable for all customers with a dosimetry program.

- Reviewing all associated dosimetry reports and providing insights and recommendations for improvement
- Managing ALARA memos
- Presenting dosimetry reviews for Radiation Safety Committee (RSC) meetings
- Signing reports via e-signature functionality
- Writing executive summaries

Regulatory Compliance Assistance

This subscription-based service provides you with the support you need to assist in maintaining quality, safety, and compliance in your radiation programs..

- Reviewing policies and procedures
- Generating Radiation Protection Programs (RPP) for X-ray sites
- Supporting Radioactive Material License (RML) amendments, renewals, and applications
- Monitoring for regulatory changes
- Communicating with agencies on your behalf
- Consulting for incidents and inspections

“Bringing in LANDAUER Radiation Safety Support made perfect sense for us. It's been a safety net for us to have their expertise just a phone call or email away, and it's saved us quite a bit of money. They are phenomenal!”

Shondra Murley
*Nuclear Medicine Manager
and Assistant RSO
West Tennessee Healthcare*

Radiation Protection Program (RPP) Development

Nearly all 50 states require a written Radiation Protection Program. Do you have one, and is it compliant?

Facilities using radiation-generating equipment or handling radioactive materials should have an RPP to ensure safe operations and keep exposures as low as reasonably achievable. Our program designs help you stay in compliance with state and federal regulations and avoid potential inspection challenges.

Let our experts review or help create your program! We cover:

- Shielding design
- Pregnant worker policy
- Equipment installation and registration
- Personnel dosimetry
- State-specific laws
- Equipment testing and maintenance
- Radiation safety education
- PPE and required supplies

Radioactive Material License (RML) Management

An RML authorizes organizations to possess, use, store, and dispose of radioactive materials (RAM). Policies and procedures for license requirements are specified in federal or state regulations. License-holders must adhere to the conditions and commitments made in the application, maintain appropriate radiation safety programs, and conduct periodic training and self-assessments to ensure regulatory compliance. Our team of experts can help you manage the renewal and amendment process for existing licenses as well as the application process for new ones.

Project Based Consulting

If you require a more custom approach to your business needs, partnering with us can support your unique program! Contact us to discuss your challenge

Why LANDAUER?

You're not in this alone. We make compliance easier and more efficient for radiation protection programs of all sizes. We offer a comprehensive spectrum of radiation monitoring and consulting solutions, tailored to your specific needs, to significantly reduce the burden of compliance and enable you to focus on the areas that matter most.

Trusted reputation. For over 70 years, we have consistently delivered accurate, reliable products and services around the world. Our uncompromising commitment to quality helps ensure our customers' radiation protection programs run smoothly.

Access to expertise. Our team of credentialed medical physicists, regulatory experts, and health physicists are here to reduce your workload by helping with any aspect of your radiation safety program, on-site or remotely. We have experience working with organizations and inspectors at the state, federal, and international level and are widely recognized as the gold-standard in dosimetry.

Proven technology. As the pioneer of occupational dosimetry and the manufacturer of our own dosimetry technology, our wide range of products deliver reliability and accuracy while maintaining integrity over time in various environmental conditions.

Radiation Safety Support Services can help you with:

- Dose Reviews
- ALARA Reports
- Executive Summaries
- Inspection Readiness
- Regulatory Updates
- Policies & Procedures
- License Renewals and Updates
- Violation Guidance
