

## Introducing

### Medical Radiation Safety Support Services for Medical, Dental and Veterinary Practices

You can rely on LANDAUER to help maintain a compliant radiation safety program given today's changing state, environmental and Nuclear Regulatory Commission (NRC) requirements

Facilities using radiation technology need creative solutions to meet today's compliance challenges. Let LANDAUER's staff of Certified Health Physicists and qualified experts in diagnostic imaging be your solution. Here is how we can help:

#### Dosimetry Management

- Review dose reports and provide electronic signoff
- Manage As Low As Reasonably Achievable (ALARA) Recap reports
- Manage ALARA II Notifications with follow up
- Prepare quarterly executive Radiation Safety Committee Report

#### Regulatory Compliance X-ray

- Monitor state regulatory requirements and implement changes
- Communicate with state regulatory agencies on behalf of the facility
- Access LANDAUER's highly qualified team of Certified Health Physicists and technological managers for two hours per quarter

#### Radiation Protection Program (RPP)\*

- Create your Radiation Protection Program
- Provide executive level review of policies and procedures of existing RPP

We can help you maintain a compliant program in today's changing regulatory environment

(over)

\*RPP is a state required annual policy

# More about your Radiation Protection Plan

A written RPP is required in nearly all 50 states for any facility with X-ray equipment or radioactive materials on site

This written document addresses policies and procedures that help your facility maintain compliance in all areas of radiation safety. LANDAUER medical physicists use a brief questionnaire to develop a customized RPP for your facility and its radiation hazards. We make recommendations and offer guidance necessary to meet applicable state regulations including NCRP documents and NRC Reg. Guides 8.13 through 8.23.

## The RPP covers the following:\*

- Personnel Dosimetry
- Shielding Design
- Required Supplies
- Equipment Installation and Registration
- Fetal Dose Policy
- Radiation Safety Education
- Equipment Testing and Maintenance
- State Specific Laws
- Help and Contact Information

*\*More or less information may be covered depending on imaging modality requirements*
